## Nursery:

Before addition can be introduced, children need to have a secure knowledge of number. In Nursery, children are introduced to the concept of counting, number order and number recognition through practical activities and games. This is taught through child initiated games such as hide and seek and I spy. Children also learn how to count 1-1 (pointing to each object as they count) and that anything can be counted, for example, claps, steps and jumps. This is reinforced by opportunities provided in the outdoor area for the children to count e.g. counting building blocks, twigs etc. Children develop the core ideas that underpin all calculation. They begin by connecting calculation with counting on and counting back, but they should learn that understanding wholes and parts will enable them to calculate efficiently and accurately, and with greater flexibility. They learn how to use an understanding of 10 s and 1 s to develop their calculation strategies, especially in addition and subtraction.
Key language: whole, part, ones, ten, tens, number bond, add, addition, plus, total, altogether, subtract, subtraction, find the difference, take away, minus, less, more, group, share, equal, equals, is equal to, groups, equal groups, times, multiply, multiplied by, divide, share, shared equally, times-table

| groups with the same number of things | the same amount. | objects contain the same amount. | contain the same amount of one type of object. <br> - As above but with different types of objects. <br> - Children identify which sets contain the same amount out of more than two sets, e.g. two sets that contain 5 objects and one set that doesn't. <br> - Children add or remove from one set to create two sets with equal amounts of objects. <br> - Children problem solve by converting two unequal groups into two that contain the same amount by redistributing some of the objects. |
| :---: | :---: | :---: | :---: |
| Comparing numbers and reasoning | When presented with two numbers, children reason about which is greater/ smaller through counting or matching $1: 1$ with objects. <br> Present children with examples of unfair sharing for them to reason why it's unfair, using the number names to explain their reasoning. | Who has more? Draw pictures in each box to prove it. $\qquad$ has more apples. <br> Use a number line to help with reasoning about which is more. | - Compare numbers that are far apart from each other. <br> - Compare numbers that are close to each other. <br> - Compare numbers that are next to each other. |

| One more/ one less | Children explore the effect of adding or subtracting one in a practical context. |  | - Identify when a set does not contain the stated number. <br> - Identify how to change the set so that it does contain the stated number (i.e. by adding or subtracting one) <br> - Recognise the effect of one more/ one less on a number line. <br> - Make predictions about the outcome of one more/ one less (fewer) in the context or rhymes and songs. |
